## Introduction

The following is a brief synopsis of my areas of interest. I have experience in several areas in the field of digital content creation, and I utilize a mix of these skills in my work. I can quickly learn new technology, and integrate several different technologies to achieve the desired result.

## Web Development and Programming

Over two years of experience developing PHP / mySql based websites. A significant portion of this includes creating Drupal-based websites. I am skilled at manipulating open source content management systems and working with QuickTime and Flash Video for streaming web content. I am very comfortable with several programming languages and products including XHTML, DHTML, CSS, XML, PHP, mySql, Flash, ActionScript 2.0, javaScript, RSS, and I have some experience with ASP, MSSQL, ajax, DHTML, and programming custom Yahoo widgets.

## 3d Content Creation

One of my main areas of interest is the creation of 3d content. I have several years of experience creating 3d content for video, online and disc-based presentations, and for print. I have created architectural 3d walkthroughs for pre-construction visualization, and integrated my 3d work using Adobe Flash to create interactive web-based learning tools.

## Interactive Flash Presentations

I have produced interactive kiosks and CD-ROMs using Flash. I use third-party software called FlashJestor Jugglor to convert the Flash project to an auto-playing CD- or DVD-Rom. There are several examples of this in the section of my website labeled 'Interactive', and example discs are available on request. (423) 737-3824 adam@acbstudios.com

## Graphic Design

3 years of experience in graphic design for multiple-color offset printing, and experience with pre-press production. (East Tennessee State University Press 2001-2003)

## Videography / Video Editing / Motion Graphics

My other areas of interest often lead me to editing video, and creating motion graphics. The main purpose of any video I edit is generally to integrate my 3d content into an existing video. I am fluent in Adobe After Effects, and very familiar with Adobe Premiere. I can work with green screen background removal, and I have some experience operating steadycams and crane cams.

## Traditional Art

I have always been a traditional artist. As a hobby as well as a part of my workflow, I enjoy conceptual sketching, marker and colored pencil illustration, and sculpture in clay, plaster, and wire. I feel that this art background gives me a good sense of design that I use in each of my areas of interest.

## Audio & Visual Systems Controllers

I have some training and experience working with commercial video and audio controllers. More specifically, I have experience programming IPlink control systems manufactured by Extron.

## Current Employment

Since April 2007, I have worked with an ad agency in Kingsport, Tennessee. My primary goals there are to design and develop drupal-based websites, and to produce motion graphics and 3d content.

## Other Skills and Career Goals

I enjoy working with forward-thinking organizations and am constantly exploring and learning about new technologies and resources. I'm team-oriented, and always open to new ideas. Currently, I have the responsibility of keeping up with deadlines, I mostly self-manage my time, and I shuffle approximately 5 to 10 projects simultaneously. I can switch between projects very quickly to accommodate changing project schedules, and am confident in explaining technical projects to a non-technical audience.

In the very near future, I would like to be employed at a place where I can use a combination of tools and technologies. I would like to be working with Drupal, PHP, and Flash, on a daily basis, and possibly producing 3d content for interactive animations. I would also be interested in a position involving creating 3d content for broadcast television or online presentations.

## Education

I have a Bachelor's Degree in Digital Media from East Tennessee State University. I specialized in 3d modeling, texturing, lighting and animation, and although I did not get a minor in fine arts, I spent my first year of college working towards a fine arts degree.

## Software / Technology and level of experience (1:somewhat familiar - 5:fluent)

XHTML (5)	ActionScript 2.0 (5)	Flash (5)	Photoshop (5)
DHTML (5)	ActionScript 3.0 (3)	Flash Video Encoder (5)	Illustrator (5)
CSS (5)	javaScript (4)	3ds Max (5)	FlashJestor Jugglor (4)
XML (5)	RSS (4)	Vray Rendering Engine (5)	Macintosh OS (4)
PHP (5)	jQuery(5)	Dreamweaver (5)	Linux OS - Ubuntu (2)
mySql (5)	MSSQL (1)	After Effects (5)	
TweenMax(4)	ajax (1)		

## Drupal

I've created several Drupal sites for clients, using a variety of contrib modules, and listed below are two examples.  
**gowasps.com** - The athletics website for Emory & Henry College. I was responsible for setting up the Drupal backend, creating a custom theme based on an existing design, and ensuring cross-browser compatibility.  
**kingsporttn.gov** - The website for the City of Kingsport, Tennessee. I was responsible for setting up the Drupal backend, and determining which modules to use to achieve the desired result.

## Modules and level of experience (1:somewhat familiar - 5:fluent)

I haven't been involved with module development, but have found that there's almost always an existing module that can meet the needs of the project.

- CCK (5)
- Automatic Node Titles (5)
- Backup (5)
- Calendar (5)
- Captcha (5)
- Contemplate (5)
- Date (5)
- Event Manager (4)
